PRESS LOCKED & FILUSH TOP GRATING

ALUMINUM BAR GRATING

Press Locked

Swaged aluminum grating is widely used in a large range of industrial & commercial applications. It is assembled by locking the cross bars to the notched bearing bars by a high hydraulic pressure. The finished product is both functionally durable and aesthetically pleasing. Aluminum grating is light weight, high strength and corrosion free which makes it a sought after alternative product.

Press Locked grating panels can also be installed as part of an architectural facade system.

ALUMINUM BAR GRATING

Press Locked

Applications

passage	ceiling	fencing
walkway	platform	building facade

Surfaces

flat	serrated
------	----------

Surface Treatments

mill finish	anodizing	powder coating
-------------	-----------	----------------

The press locked grating is made with pre-punched bearing bars and flush top cross bars fitted seamlessly together under hydraulic pressure. It has a greater load capacity than regular swaged bar grating and zero welding point offering a more elegant appearance than press-welded grating.

The SA Series press locked bar type is unique in appearance, high in load capacity, and is one of the most widely used aluminum swaged gratings. The cross bar is inserted in the notches of bearing bar and press locked into a stable structure at a force of 500 tons.

ALUMINUM BAR GRATING

Press Locked

HY industries designs and fabricates Press Locked Grating that meets OSHA safety standards and prevailing building codes for industrial and commercial facilities.
